Introducción al análisis fundamental

Objetivo

Objetivo

Proceso

Conceptos clave

- Conocer el análisis fundamental y la labor de un analista sell-side & buy-side
- Una v**isión práctica con casos reales de cómo valorar una compañía cotizada** de acuerdo a conceptos básicos de análisis fundamental (WACC, ROCE, P/E, ...).
- El análisis de las empresas cotizadas, proceso y descripción
- El coste del capital
- ¿Cómo analizar y valorar empresas?
- Aspectos clave que mueven a los valores

Agenda

- La misión de un analista financiero
- Ejemplos de análisis fundamental
- ¿Qué incluye un informe de análisis?
- Múltiplos, WACC, retornos, ratios, etc…
- Relación con las empresas cotizadas
- Relación con otros departamentos del banco
- La relación del analista con distintos tipos de inversores.
- Recomendaciones de analistas: significado, impacto real
- Cómo maximizan los analistas sus informes.
- Operativa diaria de los analistas sell-side.
- “Short-selling reports”, informes que apuestan a la baja

La Misión de un Analista Financiero

- **Lo básico**: analizar valores, publicar informes y dar servicio a inversores

- **De importancia**:
  - Un buen informe de cobertura y seguimiento
  - Conocer muy bien las compañías y el sector
  - Estimaciones financieras

- **Relevante**:
  - Poder hablar de la actualidad de la compañía con conocimiento
  - Tener acceso a la compañía

Menos importante:
  - La recomendación y el precio objetivo

Ejemplos de informes

Global Research | 1 February 2022

Melia Hotels

Outlook for 2022...recovery seems underestimated

Outlook for 2022...we believe consensus underestimates recovery

Melia is set to report 2021 results on 28 February, and host a conf. call on 1 March. The results will be interesting but investor focus may turn to 2022 prospects. Although Omicron has affected global travel lately, the company has reopened most hotels (available rooms +50% as of Q3) and latest data shows bookings are up notably. Another key consideration is that Melia has reached break-even since July, containing the cash drain. Q421 data are still set to show Omicron's negative impact, but bookings for summer are currently above 2019 levels in tourist areas. with strong pricing trends. We believe there is pent-up demand in tourism and incipient recovery signs for corporate travel. Macro weakness could be an issue, but assuming COVID gradually fades, we believe the company could surprise on the upside, our estimates are well above consensus in 2022/23E. Our rating is Buy.

Preview for 2021 results: investors likely to focus on 2022 outlook

We expect Melia'S 2021 revenues to be €867m, up 64% y/y, but still 50% below 2019 levels. We forecast EBITDA at €107m (4% mg. ex cap. gains), our numbers are close to consensus (revs/EBITDA at €870m/€110m). However, in 2022 we forecast revenues at €1457m, 25% below 2019 levels. We estimate occupancy will still be below normalised levels at 58% (normal cycle range is 58-72%), but we expect healthy prices at €125/night (2% above 2019). In 2023 we assume occupancy at 65% and prices up 5% y/y, with revenues close to 2019 levels. Latest data shows clients are not that price sensitive and Melia benefits from incremental bookings on its own website, which allows up to c20% commission savings. Melia.com has gained share in bookings (c300bp/year in 10y), and we expect c45% of bookings in 2022/23 (vs. 36% in 2019). Good prices, costs and commission savings support our 30% EBITDA mg. 2023E (cons: 27%).

Balance sheet to notably improve in our base case scenario

Melia sold €170m of real estate assets in 2021 and expects to sell a further €200m in H1 2022. This has relatively low impact vs. its real estate asset value at c€3bn. Combined with cash flow generation we expect net debt/adj.EBITDA at 5x in 2022E and 4x in 2023E which in our view is an affordable level, so, in line with the company's target we do not expect recapitalisation. We believe disposals and recovery should help the stock.

Valuation: stock on 7x EV/EBITDA 2023E vs. historical avg. at 10x

On our numbers, the stock would trade at merely 7x EV/EBITDA 2023E, below historical average at 10x. The company would be strongly cash generative with EFCF yields at high double digit. Implied risk premium on the stock is high in our view given COVID impact concerns and high balance sheet leverage, but prospects could notably improve once occupancy levels return to normal.

Family-controlled companies. Version 4.0

Are 'family-owned' firms at risk from tech disruption?

A pause in performance; updating UBS 'family-owned' stock metrics

This report follows on from a Q-Series report published in April 2015 looking at the share price performance of family-controlled firms globally. Our proprietary analysis shows that family-owned firms have outperformed global indices for the past 15 years (by c800bp/year, on average). That said, the performance of our global list of family-owned firms has paused recently (down 16% over the past 12 months). Our previous research focused on small & midcaps, as this offered better index comparability. In this note we launch the UBS Top 150 Family-Owned Global List, which also shows solid long-term outperformance vs. the MSCI World Largecap index over the past 15 years.

A look at tech disruption: is this a risk for family-owned companies?

Technology and the emergence of new models are increasingly disruptive for traditional businesses, so we ask whether family-owned firms are particularly at risk. Firms such as Alibaba, Alphabet, Amazon, Facebook and Tesla could actually qualify as 'family-owned', given their founders' stakes, though their rapid emergence contrasts with the long-term capital allocations and strategies investors might attribute to family-owned firms. To isolate the impact of technology, we excluded tech names from our lists and found no material difference in performance. We also think family-owned firms' growth and ROIC prospects remain solid, despite tech disruption. Our sample of family-owned tech stocks has outperformed the Nasdaq over the past 15 years.

Conclusions, and a look at governance metrics

Our data shows that family-owned stocks exhibit less volatility than global peer indices, and that their risk-reward metrics remain very favourable. The outperformance of UBS family-owned lists vs. global markets shows how successfully family-owned firms have adapted to the new economy, though their outperformance also owes a great deal to factors such as stock ownership, long-term strategy, tight managerial control, capital allocation etc. In this report we analyse corporate governance metrics in detail.

Preferred family-owned stocks

Family-owned firms trade on an average 19x PE, a c10% premium to the global average, which we think looks justified. Family-owned stocks that we like in terms of valuation and on fundamentals are: **Tosho and Hikari Tsushin (Japan); Straumann, Heineken, Gestamp, Ferrovial, Bucher, SFS Group and Saras (Europe); Alphabet, Comcast, Nordstrom and Pinfra (Americas); and AKR Corporindo, Pakuwon Jati. Dr Lal Pathlabs, Indian Hotels, First Resources, CDL and GT Cap (Asia ex-Japan).**

About FCF and balance sheet

Melia's debt has increased from €600m in 2019 to €1261m as of Q3 2021. The group plans to sell real estate €200m in coming quarters, and we forecast FCF at €100m in 2022E and €200m in 2023E. This is predicated on group revenues at c75% of normal in 2022E and full recovery in 2023E. One important issue is that tax credits imply very low tax rates in the future. On our estimates debt/adj-EBITDA would still be high at c5x in 2022E but lower in 2023E at 4x. Melia still owns c€2bn of real estate assets.

Source: Company accounts, UBS estimates. (UBS) metrics use reported figures which have been adjusted by UBS analysts.

Los ratios, por ejemplo el PER ('price-earnings ratio) son muy utilizados, resumen en 1 número la relación entre el valor y los fundamentales.

Por ejemplo, PER: valor/beneficio

Una empresa que vale 1000, si gana 100, su PER: 10x

Ejemplo resumen de ideas de inversión

Fresenius:compañía alemana de salud

•Grupo sanitario alemán con dos divisiones, hospitales (Quirón…) y pharma/medcare, que tras años de diversificación excesiva y bajos retornos ha reenfocado el portfolio hacia las áreas más rentables, apoyado en el lanzamiento de 4 biosimilares con elevado potencial que impulsan crecimiento, expansión de márgenes y una mejora

DEME Group: Empresa belga de la familia Ackermans (62%). Uno de los 4 líderes globales del sector. Se dedica al dragado (puertos, etc.) y a instalaciones offshore. Pensamos que existe un desequilibrio entre oferta y demanda, por lo que los precios y los márgenes subirán; muy buena cartera de pedidos (2,5 años)

Key risks to our investment thesis

- Key downside risks to our Buy rating include market share loss, pricing pressure, lower-than-expected reimbursement increases at Helios and adverse regulatory changes.
- Other risks include larger-than-expected cost increases, adverse FX changes and manufacturing interruptions.
- Finally, failure to obtain regulatory approvals for new products and to successfully commercialise biosimilar products is a risk.

Key risks to our investment thesis

- **Slowdown in regulation:** If lawmakers back away from their ambitions for a lower-carbon footprint and a higher share of renewables in the energy mix, growth in offshore wind may lose some impetus.
- **Protectionism:** Protectionist measures or geopolitical influence could limit the chances of DEME winning international dredging tenders.
- **Project execution:** If works do not proceed as planned, that could lead to cost overruns or reputational damage.
- **Fleet misinvestment:** Overinvesting may result in low fleet utilisation levels, while underinvesting may reduce the group's competitiveness.

Key risks to our investment thesis

- Material upside risk stems from a turnaround in the Gamesa business and a reversal of the negative valuation currently assigned to this division.
- Renewed pressure in the former Gas & Power business as a result of lower utilisation levels of gas turbines could drive service revenue and service margins lower to the extent that the medium-term group margin objectives are unattainable. We think this is low-probability.
- As GE Vernova is newly listed, we expect volatility in the valuation of that asset while it finds its own valuation, which could in turn drive volatility of the Siemens Energy equity also.

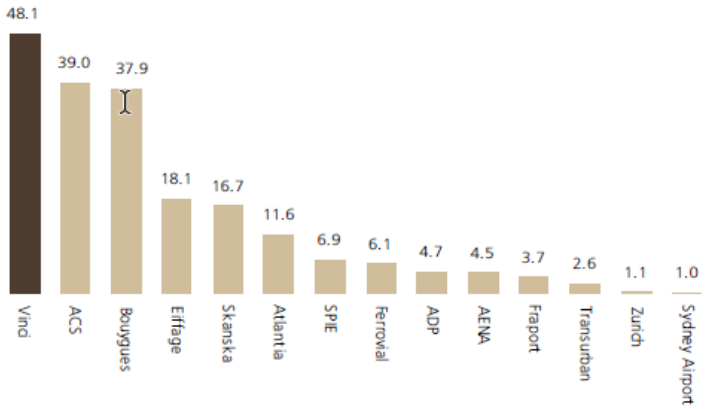
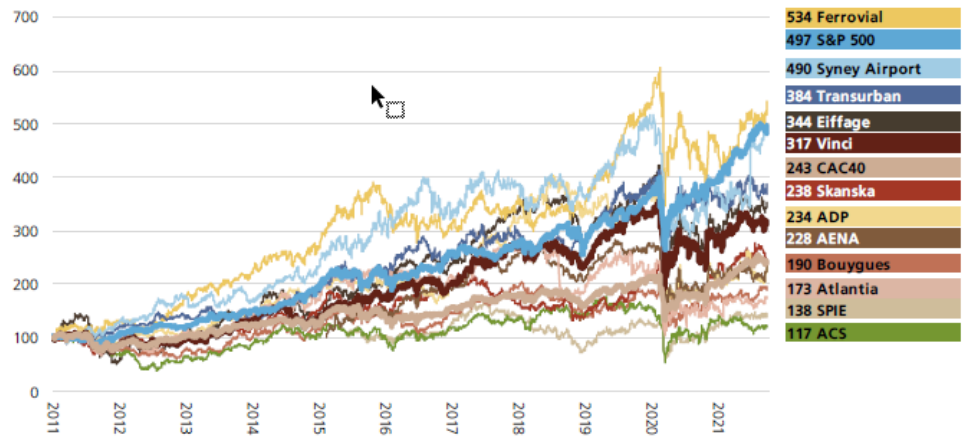
Comparar es muy importante

2019 Revenue (€bn)

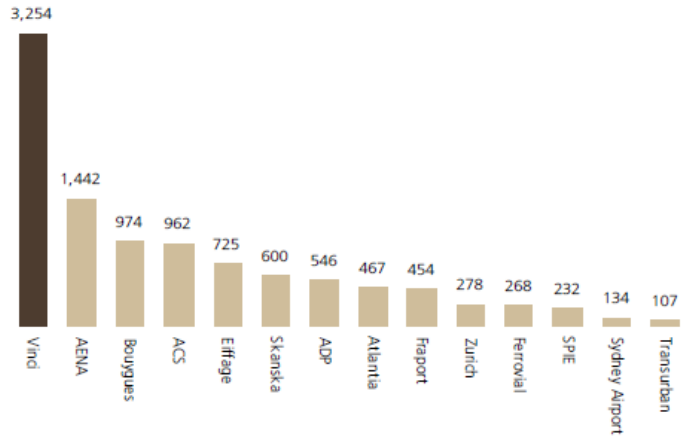


Source: Company data

TSR in € (2011=100)

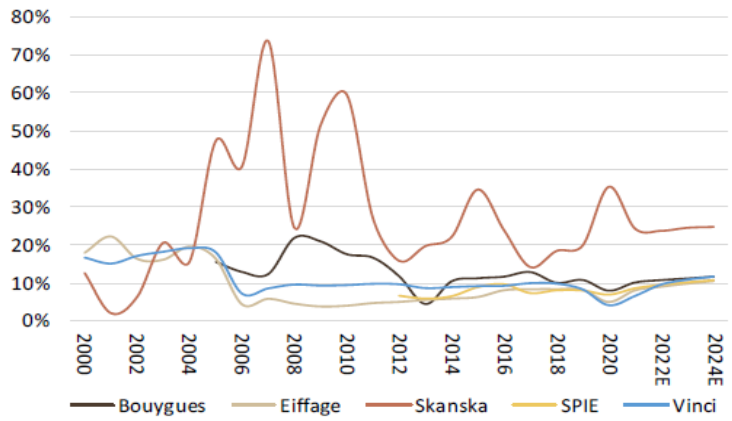


2019 Net income (€m)



Source: Company data

ROCE vs Peers (%)



Source: Company data, UBS estimates

El análisis abarca todos los aspectos claves de una compañía

Conocimiento del sector: factores que impulsan los precios, oferta y demanda, márgenes, capex, competencia, regulación, barreras de entrada y salida, tendencias futuras, vínculo con la economía, etc.

Conocimiento de la compañía: entender básicamente cómo gana dinero la empresa y qué la diferencia de la competencia, fortalezas, debilidades, riesgos y oportunidades.

Hipótesis clave: volúmenes, precios, mix, márgenes, capex, impuestos, coste de la deuda, pay-out.

Capex-Rentabilidad-Crecimiento: impacto en el crecimiento futuro, ¿invertir o devolver dinero a los accionistas? ¿Invertir o recomprar acciones propias? ¿Qué es mejor para los accionistas? ¿Qué genera más creación de valor? Riesgos de ejecución.

Apalancamiento: tipo fijo vs. variable, endeudamiento, necesidades de refinanciación y riesgos a corto plazo, uso del exceso de caja sobre el objetivo de deuda neta/EBITDA.

Desglosar el modelo. Identificar los factores clave de rentabilidad. Flexibilizar las hipótesis clave.

Emitir un juicio sobre el binomio riesgo/rentabilidad. Precio objetivo vs. valor razonable (valor intrínseco).

Construir la plataforma (de análisis/modelización). ¿Qué incorpora ya el precio?

Pasivos fuera de balance (compromisos, garantías). Activos intangibles (amortización o gasto). Fondo de comercio (riesgo de deterioros).

Inversiones (riesgo de deterioros). Capital circulante (positivo/negativo, titulización, anticipos): problemas actuales en la financiación del capital circulante. Tasa de depreciación de los activos tangibles (alta/baja).

Vencimientos de la deuda y necesidades de refinanciación (calificación crediticia): riesgo de restricción del crédito. Pasivos por pensiones (déficits): sistemas de prestación definida afectados por caídas de mercado. Necesidades de capital (cuando proceda).

Motores de crecimiento de las ventas (volúmenes y precios). Margen operativo (apalancamiento).

Aspectos ESG que cubran todas las dimensiones.

La misión del analista

¿Quién es un buen analista?

- **Un buen analista tiene un nivel de conocimiento de las compañías y su sector superior a la media del mercado**

- **Un analista excepcional comunica excepcionalmente con el mercado y es capaz de mover los valores**

- **Acceso a inversores relevantes es la clave para tener audiencia. Un buen equipo de ventas es importante**

- **No todos los buenos analistas son iguales**
  - **Analista exhaustivo: muy centrado en los números**
  - **Analista creativo o "contrarían": visión diferenciada**
  - **Analistas corto vs. analistas de largo plazo**

Las recomendaciones y los analistas

- ¿Es importante acertar?...no tan importante..

Hay varios tipos de recomendaciones: comprar/vender, infra/sobreponderar

¿Qué es acertar?: hay muchos tipos de clientes

-Hedge funds corto plazo: buscan información que mueva mercado rápidamenente

-Long only grande: la clave es conocer bien las compañías Y SUS GESTORES

-Gestores de fondos de "shorts", de volatilidad, derivados

-Fondos clásicos, fondos de dividendos...

-Fondos de M&A y eventos...

- **Lo importante es ayudar en la decisión de inversión para generar retorno, normalmente acertar, pero no es la clave.**

El analista es un altavoz al mundo financiero

- Analista publica informes largos, notas cortas, diarios…

- **Distribución de informes puede superar 50.000/100.000 inversores al día**

- **Un analista pasa de 1 a 3 horas al día hablando con inversores**

- **El equipo de ventas de un banco grande supera las 100 personas hablando con clientes institucionales de todo el mundo**

- **Las bancas privadas también hablan con inversores privados, en algunos casos hay +20.000 banqueros…**

- **No es la prioridad pero el research se distribuye a Reuters, Bloomberg, y en muchos casos llega a la prensa especializada y no especializada**

¿Cómo se evalúa a un analista y cómo se paga?

- **Desde MiFID los clientes pagan en función del tiempo que utilizan de los analistas, tiempo con clientes es clave**

- **Las encuestas como el Institutional Investor son importantes**

- **Se evalúa el éxito de las recomendaciones**

- **Encuestas internas con los traders, vendedores, etc**

Se paga un fijo y un variable relevante (en función del Bº del banco y desempeño del analista)

Un ejemplo del día a día del analista

- Advisory function to professional fund managers
- "Intermediary" between corporate and investor
- Information services
- Publishes independent company research
- Produces financial forecasts based on financial models
- "Consensus" is the average of all sell-side analysts
- Produces price targets and stock recommendations
- Spends time with investors (phone/meeting/zoom) to discuss ideas
- Organizes corporate roadshows / expert access events

My typical day:

- 7am start at the desk ready for morning news-flow morning meeting
- 2-3 hours on the phone with investors / clients
- 1-2 hours spent on updating financial models
- 1-2 hours writing company research
- Speaking to management / investor relations, industry experts
- Finish between 6-7pm

Relaciones con otros departamentos del banco

- Digan lo que digan los buenos analistas son INDEPENDIENTES
  - Pero existen potenciales conflictos de interés
  - Las empresas pueden ser clientes relevantes
  - Posibles conflictos con operaciones corporativas
  - Las murallas chinas existen y se respetan
  - Control constante de la actividad del analista
  - Se intenta minimizar los posibles conflictos
  - Banca retail puede ser también un área de posibles conflictos de interés

- Conferencias, roadshows y reuniones con inversores

El acceso a las compañías es muy importante para conocerlas y poder escribir

Los analistas son conscientes de las limitaciones

Se valora mucho el acceso al equipo gestor, pero deben tener experiencia con los mercados financieros y la regulación

Los roadshows y conferencias son relativamente importantes

Una situación de excepción: “Short-selling reports”. Casos y recomendaciones ante informes de análisis que apuestan a la baja.

Casos conocidos:

Report	Short Seller/Firm	Target Company	Stock Reaction
Enron fraud analysis (2000-2001)	Jim Chanos (Kynikos Associates)	Enron	Stock collapsed from over $90 peak to pennies; bankruptcy filed Dec 2001, Chanos profited ~$500M
Accounting issues speech (2008)	David Einhorn (Greenlight Capital)	Lehman Brothers	Contributed to decline amid crisis; stock fell sharply, firm bankrupt Sept 2008
Fake revenues exposed (2014)	Gotham City	Gowex	Crashed 70% in 1 day, filled for bankrupcy later, CEO Jailed
Philidor ties "smoking gun" (2015)	Andrew Left (Citron Research)	Valeant Pharmaceuticals	Plunged ~40% in one day to ~$88/share
Pyramid scheme presentation (2012)	Bill Ackman (Pershing Square)	Herbalife	Dropped ~33% initially to ~$26/share, later volatile with probes
Fake truck video fraud (2020)	Hindenburg Research	Nikola	Dropped ~40% in one day to ~$13/share; founder resigned, SEC charges followed
Accounting fraud claims (2021)	Hindenburg Research	Lordstown Motors	Fell ~25% initially; later bankruptcy in 2023 amid investigations
"Ponzi-like" dividends (2023)	Hindenburg Research	Carl Icahn Enterprises	Plummeted ~82% from report date through early 2026
Stock manipulation & fraud (2023)	Hindenburg Research	Adani Group	Wiped ~$150B market cap initially; some recovery later
Accounting and governance 2024	Gotham	Grifols	Stock collapsed 43%, still below today

Es común una caída entre el 25% y el 80% del valor

“Short-selling reports”.

- Una situación muy compleja.
- Una labor que trasciende a la función de los rrii
- Consultas legales y contacto con CNMV
- Periodo largo de tiempo

Es clave: un informe así está motivado para ganar dinero, pero siempre suele tener alguna base. OJO SUELEN TENER VERSION 2.0, 3.0, 4.0

Ideas que han funcionado:

- Inicialmente una nota simple ofreciendo transparencia y medidas
- Informe posterior detallado
- Forensic puede ayudar
- Ver informe comparables: Tememos, Grifols, Immagotag
- Roadshow, conference calls

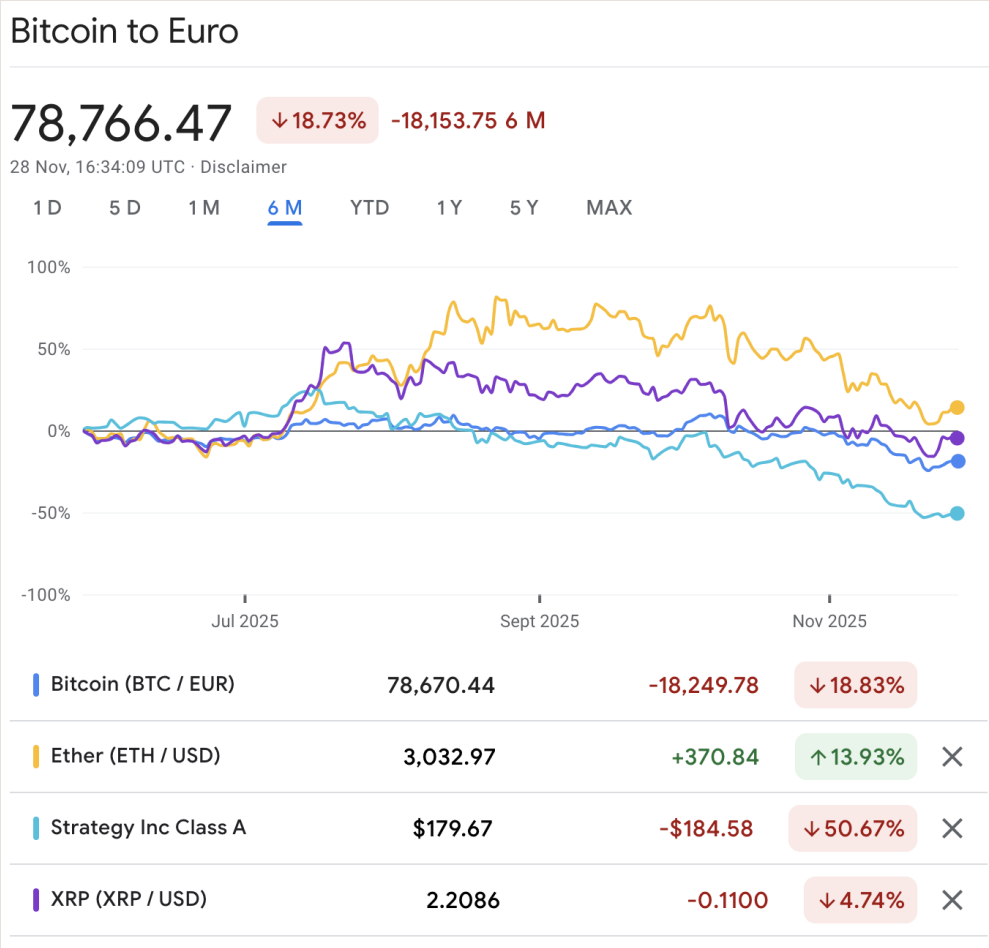
Very high returns in 5 years

Real Estate Home values in the US vs. Stock Market



Algunas recomendaciones

- Ahorrar pronto puede marcar una gran diferencia… ¡empieza ya!
- Una cultura de ahorro es una buena filosofía a largo plazo.
- Aprenderás más perdiendo dinero que con ganancias rápidas al principio… ¡adelante!
- La inflación puede destruir tus ahorros.
- La renta fija puede proteger a corto plazo, pero a largo plazo es improbable que genere buenos retornos.
- Oro, cripto, alternativos… es muy especulativo comprar sin rentabilidades… debe ser un % muy pequeño de los ahorros.
- El inmobiliario ha generado rentabilidades aceptables, un buen hedge contra la inflación.
- Las acciones han sido históricamente una buena forma de generar buenos retornos.
- Cuándo comprar: piensa a largo plazo, puedes sufrir retrocesos a corto plazo (-50% o más en 1 año), pero tiende a recuperarse.
- Los mercados están caros en este momento, particularmente en EE.UU., sé cauto.
- Revisa las comisiones, opta por calidad, evita compras especulativas, compra calidad.
- No necesitas ser un experto, pero sí saber lo suficiente para proteger tus ahorros.
